

CLAIMS

1. A viscous food containing soybean produced by mixing, in a predetermined mixing ratio, a tofu-like basic food material made of raw materials composed of at least water and soybean with at least egg and edible fat and oil.
2. A viscous food containing soybean produced by mixing, in a predetermined mixing ratio, a tofu-like basic food material made of raw materials composed of at least water and soybean with egg yolk, edible fat and oil, acidulant, spice, and salt.
3. A viscous food containing soybean produced by mixing, in a predetermined mixing ratio, a tofu-like basic food material made of raw materials composed of at least water and soybean with egg white, edible fat and oil, fruit juice, and saccharide.
4. A viscous food containing soybean produced by mixing, in a predetermined mixing ratio, a soybean liquid with at least egg and edible fat and oil, wherein the soybean liquid is prepared by stirring soybean powder obtained by grinding soybean into powder after drying and removing the shell in water.
5. A tofu-like basic food material for producing a viscous food containing soybean, wherein the tofu-like basic food material is produced by using soybean powder and water as raw materials, wherein the soybean powder is obtained by grinding soybean into powder after drying and removing the shell.
6. A process for producing a viscous food containing soybean, the process comprising: a soybean liquid producing step, wherein the soybean liquid is produced by using at least water and soybean; a basic food material producing step, wherein a tofu-like basic food material is produced by coagulating the soybean liquid with the addition of a coagulant; and a stirring step, wherein at least egg and edible fat and oil are mixed while stirring with the tofu-like basic food material in a predetermined mixing ratio.
7. A process for producing a viscous food containing soybean, the process comprising: a soybean liquid producing step, wherein the soybean liquid is produced by using at least water and soybean; a basic food material producing

step, wherein a tofu-like basic food material is produced by coagulating the soybean liquid with the addition of a coagulant; a first stirring step, wherein a first mixture is produced by mixing while stirring egg yolk, spice and salt in a predetermined mixing ratio; a second stirring step, wherein a second mixture is produced by mixing while stirring an acidulant with the first mixture in a predetermined mixing ratio; a third stirring step, wherein a third mixture having a semi-solid-like state is produced by mixing while stirring edible fat and oil by a small amount at a time with the second mixture in a predetermined mixing ratio; a fourth stirring step, wherein a fourth mixture is produced by mixing while stirring the third mixture with the tofu-like basic food material in a predetermined mixing ratio; and a fifth stirring step, wherein a mayonnaise-type food is produced by mixing while stirring a boiled acidulant with the fourth mixture in a predetermined mixing ratio.

8. A process for producing a viscous food containing soybean, the process comprising : a soybean liquid producing step, wherein a soybean liquid is produced by using at least water and soybean; a basic food material producing step, wherein a tofu-like basic food material is produced by coagulating the soybean liquid with the addition of a coagulant; a first stirring step, wherein a first mixture is produced by mixing while stirring egg white, edible fat and oil, and fruit juice in a predetermined mixing ratio; a second stirring step, wherein a second mixture is produced by mixing while stirring the first mixture with the tofu-like basic food in a predetermined mixing ratio; and a third stirring step, wherein a yoghurt-type food is produced by mixing while stirring saccharide with the second mixture in a predetermined mixing ratio.

9. A process for producing a viscous food containing soybean, the process comprising: a soybean powder producing step, wherein a soybean powder is produced by grinding soybean after drying and removing the shell; a soybean liquid producing step, wherein a soybean liquid is produced by using at least water and the soybean powder; and a stirring step, wherein at least egg and edible fat and oil are mixed while stirring with the soybean liquid in a predetermined mixing

ratio.

10. A process for producing a tofu-like basic food material which is used for producing a viscous food containing soybean, the process comprising: a soybean powder producing step wherein a soybean powder is produced by grinding soybean after drying and removing the shell; a soybean liquid producing step, wherein a soybean liquid is produced by using water and soybean powder; and a basic food material producing step, wherein a tofu-like basic food is produced by coagulating the soybean liquid by adding a coagulant to the soybean liquid.
